Understanding Green Roofs and Living Walls

What Are Green Roofs?

Green roofs, also known as vegetated roofs, involve installing a layer of vegetation on top of a building?s roof. This system typically consists of several layers, including a waterproof membrane, root barrier, drainage layer, growing medium (soil or substrate), and the plants themselves. There are two main types:

- **These are designed for extensive plantings like shrubs and small trees, requiring more maintenance and structural support.**
- **Extensive green roofs:** These feature low-growing plants such as grasses, sedums, and mosses, and are generally lighter and easier to maintain.

What Are Living Walls?

Living walls, also called vertical gardens, involve growing plants directly on vertical surfaces or on a specially designed framework attached to walls. They can be planted with a variety of species, from flowering plants to herbs and ferns. Living walls can be:

- **Panel-based systems:** Modular panels containing plants are installed on the wall, making maintenance easier.
- **Drainage and irrigation systems:** Integrated systems ensure plants receive adequate water and nutrients.
